ONTIME COURIER GMBH: COMPANY CELEBRATES MAJOR ANNIVERSARY

30,000 stem cell transportations in 15 years of company history. A success story that has saved numerous lives worldwide.

(Munich, February 2020) – When most people think about stem cell and bone marrow donations, it’s usually the doctors and hospitals where these life-saving operations take place that come to mind. A vital factor is often neglected: the overall logistics and transportation of the stem cell and bone marrow donation from the donor to the patient. This is fulfilled by “silent heroes” who create the basis for the life-saving measures. Although it usually operates in the background, the company Ontime Courier GmbH is celebrating a major anniversary this year: 30,000 stem cell transportations during the past 15 years.

The Munich-based company Ontime Courier has specialised in the transportation of stem cell and bone marrow donations since 2005; since 2014 as Ontime Onboard Courier GmbH in a separate company. With its headquarters in Munich as well as branches in Cologne and Chicago, the internationally renowned company is a specialist and contact partner for the transportation of urgently needed stem cell donations that are transported daily worldwide from the donor to the patient.

In 2019 more than 3,500 transportations of life-saving stem cell donations were carried out nationally, internationally and intercontinentally: over the past 15 years the company has commissioned over 30,000 accompanied transportations on all 6 continents, making an essential contribution to the survival of leukaemia patients. This makes Ontime Onboard Courier GmbH one of the leading companies in this field worldwide. 15 years of experience and skill as well as a team of highly motivated employees ensure that on every day of the year, round the clock, transportation can be carried out. State-of-the-art transport equipment, online tracking and availability of services 24/7/365 are a matter of course and are valued worldwide by the clients. Silent heroes with a formidable success story.

“We’re not only proud of this performance but in particular of what it involves», says Dr. Dieter Kraft, executive director of Ontime Courier GmbH. “Over the past 15 years we have been able to contribute to saving numerous lives and that’s the most important thing. The company was established with exactly this ideology and we continue our company history unstintingly with exactly the same passion as with our first stem cell transport.«
