

Roundtable discussion: **Donor selection and donor safety**

Ivy Ekem (Ghana)

Jörg Halter (Switzerland, Moderator)

Koichi Miyamura (Japan)

José Nuñez (WHO) Seun Adebisi (Nigeria)

Jaimendra Singh (South Africa)

Nina Worel (Austria)

Donor selection

- What would be an appropriate algorithm for related donor search and beyond?
 - *Which health assessment before HLA-typing?*
 - *HLA diversity - extended family typing or even going beyond?*
- Is there a need for better integration of already existing donor registries to expand HLA repertory?
- Is there a need to establish regional donor registries?
What would be the minimum to do for donors on the register , as regards information from them as well as from the registries to them?
- Possibilities to fund registries?
- If resources are limited: what could be the role of haploidentical donors? Is there a role for cord blood?

Safeguards to protect the donors

- Divided responsibility: how to organize?
For HLA-typing, donor information and donor medical work up.
- Ethical and legal environment and its role for donor consent and pediatric donors
role of a donor advocate
- PBSC-donation: G-CSF storage and application, need for CVC, technical support and experience
- BM-collection: experience of collection team, anaesthesia
- (short-term) donor outcome follow up if resources are limited
