

## **Safeguards to protect the donors**

- Divided responsibility for HLA-typing and donor information
- Divided responsibility for donor work up
- G-CSF application, need for CVC
- BM collection: anaesthesia, team experience, hospital stay
- How to protect pediatric donors?
- Should donors be vaccinated?
- Donor follow up if resources are limited

## Donor selection

- Is there a need for better integration of already existing donor registries to expand HLA repertory
- Need to establish regional donor registries or expand existing registries
- If resources are limited: favor haplo or cord
